RISK PROFILE

NAV per Share can go up or down and the amount invested in the Fund is at risk. The Fund uses leverage and derivatives for hedging and/or as part of its investment strategy which entails additional risks and costs. For further details, please refer to the Offering Documents.

PORTFOLIO UPDATE

During the month of November 2024, the Fund NAV decreased by 2.26% as against a decrease of 0.17% for Indian bonds in Bloomberg EM USD Corp and Quasi 1-3yr Index. Utilities and Consumer Non-cyclical sectors were the key negative contributors while Basic Materials and Financial were the key positive contributors.

India is one of the top performers in the US dollar bond market over the past decade (2013–2023). The decline in NAV was primarily due to risk-off sentiment for Indian credits which resulted in elevated yields despite improving credit profiles; the recent volatility provides attractive investment opportunity.
